

## AirPatrol Press Release

FOR IMMEDIATE RELEASE

### **AirPatrol Releases ZoneDefense 1.2 and Extends Previous Capabilities**

*Release of Version 1.2 extends 1.1 with Further Integration, Windows OS support, Multi-Site Facilities, Product Enhancements and more.*

**Columbia, MD – February 9, 2012** – AirPatrol Corporation, a leader in cognitive mobile security, has just released version 1.2 of ZoneDefense less than six months after the initial revealing of the revolutionary product.

ZoneDefense is a new mobile monitoring and policy enforcement technology that lets enterprises support the use of consumer and mobile devices on premises while ensuring end users adhere to established security policies.

“By extending the reach of the ZoneDefense platform to laptops and tablets running the Windows XP and Windows 7 operating systems, AirPatrol will be the first company to bridge the gap between the PC and the Mobile worlds in location-based Cognitive Mobile Security,” said Dr. Guy Levy-Yurista, AirPatrol’s Vice President for Products and Development.

ZoneDefense version 1.2 brings location-based wireless policy management to laptops and integrates AirPatrol’s WPM (Wireless Policy Manager) which manages and secures wireless endpoints. The importance of securing endpoints was a topic of AirPatrol’s most recent [whitepaper](#).

Enterprises and agencies may operate in more than one location and ZoneDefense 1.2 incorporates multi-site features. By continuously monitoring and managing all locations from a centralized console, the dangers posed by wireless devices are now manageable at the enterprise level.

Utilizing commercial wireless bands, Cellular and Wi-Fi, ZoneDefense’s carrier-agnostic abilities are able to track a device within a couple of meters of its exact location. Platforms supported currently include iOS, Android, BlackBerry and Windows XP/7 OS.

Included in 2011 InformationWeek’s [Top 10 Mobile Security Vendors to Watch](#) alongside market makers such as Google, Symantec and McAfee, AirPatrol continues to lead the industry in cognitive mobile security and context-aware computing.

---

**About AirPatrol:** AirPatrol is the first and only security company whose technology can continuously monitor any mobile device on cellular and Wi-Fi channels in an enterprise, determine its compliance with security policy, enforce the appropriate policy on the device in real time and dynamically empower the device’s capabilities for the situation regardless of who the user might be. AirPatrol offers a comprehensive suite of location-based management solutions that enable clients in the government, financial, healthcare, corporate and retail sectors to keep pace with the expanding security requirements of an increasingly mobile world. <http://www.airpatrolcorp.com>
